SUPPLEMENT TO
REPORT NO.f62
79

1. The RFT Central Laboratory for Signals and Special Equipment in Berlin-Koepenick, Mendenschlossstrasse 153 was transferred from the MSP (Russian Naval Ministry) to the RFT (Radio-und Fernmeldetechnik VVB) on 1 January 1950. It remains, however, under the control of a Russian named Sharbanov, and has been allotted two million marks by the Russians for research during 1950.
2. Other personalities employed there include:

Tartinov }	Russians
Tikhanov }	
Paulussen	Political Director (SED)
Dr. Kassel	German head of the laboratory
3. Research includes the development of a high-frequency impulse generator. The impulses are at least 10^{-8} seconds, and are to be of square-wave form. Broad band amplifiers for DC and very high frequency were required urgently for this work. None is available in the East Zone, and the Germans suggested that some should be ordered in the Federal Republic. The Russians refused permission on security grounds.
